Core Catalog 2002

JVC®

2002

Outstanding quality and performance that is unsurpassed by our competitors is the driving force behind JVC's core model lineup every year. Our goal is to incorporate the latest and greatest technologies into our core models and at the same time continue to uphold the highest quality standards. The year 2002 is no exception.

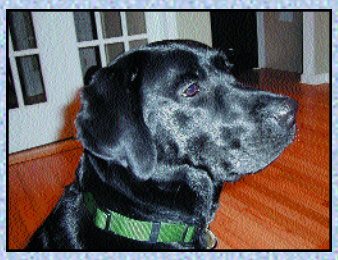
For 2002, our core lineup contains more great and exciting features than ever before. At the top of the list is our new and improved onscreen menus which are even easier to use with a great new half tone look. In addition to the new menus, new features include a Front Panel Lock, Auto Shutoff, On-Timer Volume Setup, and XDS ID Display on models 27 inches and larger. Added to all PIP models is JVC's revolutionary EZ Surf. Learn more about these and all of JVC's great core features here in this catalog.

Picture Features

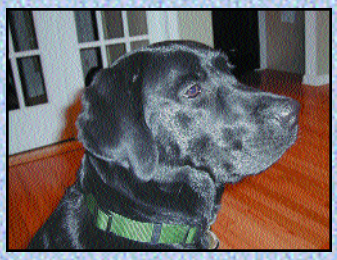
Those who are familiar with JVC TVs know that our picture quality is the best in the industry. This is true because to us our picture quality is a reflection of our reputation and therefore each and every model we develop includes key video features to make the picture look great.

Black Level Expansion

JVC's exclusive Black Level Expansion technology creates dark, rich blacks so that colors become deeper and more vivid. Our chassis designs also make for brilliant whites and a dynamic high contrast picture. Compare the sharp detail and outstanding black colors of the dog in the JVC picture to the ordinary picture.



JVC Picture



Ordinary Picture

Dark Tinted Picture Tube

Another element that insures outstanding picture quality in our TVs is the Dark Tinted CRT. All of our Dark Tinted CRTs create much greater contrast between darks and lights over standard CRTs. These CRTs also increase the depth of the black and dark colors on the screen to really make the colors "pop".

Apacon

Apacon is another JVC feature that helps insure that every JVC TV has the exceptional picture quality for which we are known. Apacon is a circuit that enhances picture sharpness by sharpening the transitions between dark and bright, by adding preshoot and overshoot, and by speeding up the transition. Apacon makes sure details are enhanced so that the picture is always crisp and sharp.

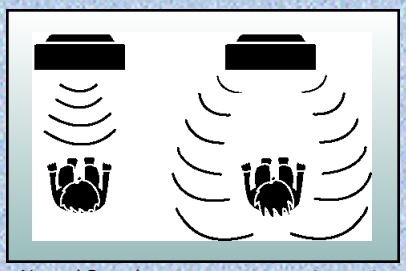
3 Line Digital Comb Filter

On model sizes 27 inches and larger, the 3 Line Digital Comb Filter provides a sharper overall picture and smoother graphics than TVs without one. The comb filter insures that text blocks in programs such as sporting events and news casts look better because the Comb Filter corrects hanging dots, color bleeding, and cross color interference that often occurs on the text on screen. A 2 Line Digital Comb Filter is available on model TV-20F243.

Important Note: *Features listed above are available on select models.*

Sound Features

Superior sound is another feature that makes JVC TVs better than the rest. At JVC, we have designed many sound benefits into our core TV line. Whether you listen to the TV's own speakers, or, for stereo models, connect to a HiFi or surround sound system, all JVC TVs sound great.



Normal Sound Hyper Surround Sound

Hyper Surround Sound

A JVC exclusive feature, Hyper Surround Sound creates the impression of a 3-dimensional soundfield using the TV's front firing speakers. Hyper Surround electronically processes stereo audio signals by manipulating the phase relationships and frequency response for a fuller, richer 3-D effect. With Hyper Surround, it sounds like you are right in the middle of the action without the need for extra rear speakers.

MTS Stereo Sound with SAP

Every JVC stereo television has high performance MTS for superb stereo sound. Whether you use the TV's already superior sound system, or connect the TV to a multi-channel sound system, it is guaranteed to sound great.

Front Firing Speakers

For richer, fuller sound, all JVC TVs are designed with front firing speakers. Because the speakers are aimed directly at the viewer, a rich, clear sound stream is created that enhances both music soundtracks and dialog.

Convenience Features

JVC keeps competitive in the Home Theater market by continuing to incorporate the best key inputs and options. Our customers are sure they can connect any and all of their components to one of our TVs.

DVD Component Input

Our DVD Component Input (Y, P_B, P_R compatible) ensures that when people buy a JVC TV, 27 inch or above, they know that it will be compatible with current DVD players, satellite systems, and set top boxes.*

S-Video Input

All 27 inch and larger screen size models are equipped with an S-Video Input which insures your S-Video Camcorders or S-Video VCRs will yield better color reproduction than if connected to a standard composite input.

Front AV Inputs

This year every core line model comes equipped with a Front AV Input. This convenience feature makes connecting to camcorders and video game consoles quick and simple.

Fixed Audio Output

Every stereo model in our core line comes with a Fixed Audio Output which lets you connect the TV to your stereo system so you whatever programming you watch benefits from your stereo's sound.

TV Speaker On/Off In Menu

Most JVC stereo televisions allow you to switch the TV's speakers to off when you want to listen to a multi-channel AV receiver sound system. Just as easily, you can switch the speakers back on when you just want to watch the news.

Great New Features

Interactive Plug In Menu ... an even easier menu to help you setup your preferences right from the first time you turn on the TV. The Interactive PIM walks you through each menu, one at a time so you do not have to switch back and forth between basic setup menus ever again.

XDS ID Display ... when turned on the XDS ID Display provides useful information for viewers such as a channel's call letters, the network's name, and even a program name for what is currently on that channel. Note: broadcasters provide the XDS information and therefore it may vary.

On-Timer Volume Setup ... a supplement to the handy On-Off Timer, the On-Timer Volume Setup feature lets you preset the volume at which the TV will turn on when the On-Timer is activated.

Front Panel Lock ... the new front panel lock feature lets you decide whether the buttons on the front panel will operate the TV or not (especially handy when toddlers are in the button pressing phase!)

Auto Shutoff ... this power saving feature insures that you are not wasting energy by monitoring the incoming signal minute by minute and automatically shutting the TV off when no signal is received for more than a minute.

Video Status ... lets you choose preset picture settings designed to complement the type of programming you are watching — choose from factory Standard / Sports / Dynamic.

Standard Features

Channel Guard & V-Chip ... lock out “unauthorized” viewers from specific channels or entire time slots.

XDS Auto Clock Set ... sets the clock for you.

The Multi-function Timer ... can make it seem like you’re home watching TV when you’re really not. Or, it can be set to remind you when a favorite program comes on or to wake you up in the morning.

The Sleep Timer ... will turn the TV off after a specified amount of time (up to 180 minutes).

Auto Tuner Setup ... activates all of the current, active channels so you can scan sequentially without noise or video snow. The simple JVC onscreen menus allow users to easily add or delete channels manually too.

Noise Muting ... places a placid blue screen in the space of channels receiving loud, noisy static.

Closed Captions w/Text ... decodes any captions or other text information that is included in a program such as second audio programming.

Display ... shows the status of the TV timers and inputs with a press of the button, or, if you prefer, it can continuously display the time or channel so you always know!

Tri-Lingual Menus ... let you choose the language, English, French or Spanish, for the onscreen menus and displays.

Game Mode ... optimizes the TV’s color setup best for video game play. (13V and 20V).

Return+ lets you return to a channel via the 10 key pad with regular return, or program a "Return Channel" to be returned to after sequentially scanning the channels.

Hyper Scan ... the fastest channel changing technology in the industry. Press and hold the CH+ or CH– button and the channels will race by at 5 channels per second.

Important Note: *Features listed above are available on select models.*

Combo Features

No matter what room you are looking to furnish, one of our TV/VCR combos will fit right in: either 13 inch combo is perfect for the kids' room; the color of our white model (TV-13143W) is a perfect complement to many kitchen appliances; and, our 20 inch flat screen model is perfect for a students' dorm room or an office.

EZ JECT ... our exclusive rental tape return feature ~ use it and no more fees for not rewinding!

Procision 19µ VCR Technology ... provides superior picture quality by eliminating picture anomolies such as ghosts, color beats and crosstalk. It also boosts EP pictures to near SP levels.

Skip Search ... advances video tapes 30 seconds for each press of the button to help skip through commercials.

Index Search ... a JVC exclusive feature, automatically marks the tape with an index point so that you can easily cue or review to the beginning of a program you prerecorded.

Auto Tracking ... insures the best possible picture from any tape by automatically adjusting the horizontal and vertical stabilization.

Picture In Picture

JVC's Picture In Picture technology has always been among the finest in the industry — it's simple to use and easy to hook up with 2 tuners built right in. Now, our PIP is even better because it not only retains its versatility, but we've added a new feature we call EZ Surf, the ultimate in channel surfing ...

JVC's Freeze can capture a screen shot of an important number

Dual Tuner Picture In Picture
JVC's PIP is crisp, clear, and versatile. With two tuners built right into the set, you can see two programs at once, or with another video input hooked up, a video and TV. JVC PIP also lets you SWAP the PIP program with the main program, and MOVE it to any corner of the screen with the simple press of a button.

EZ Surf
The ultimate in channel surfing, EZ Surf utilizes the PIP window to create the ultimate channel surfing engine by letting you actually scan through all the channels without leaving your current program.

Freeze
JVC PIP also lets you FREEZE a picture in the main screen so you can catch an important phone number, address or just a funny expression. If PIP is already activated, you can FREEZE the PIP screen.

Multi-function Timer Preview ... JVC PIP models also utilize the PIP screen in another unique way. Combining PIP technology and our exclusive Multi-function Timer, JVC PIP models offer a Timer Preview Window. This feature provides a 7 second preview in the PIP screen just before the TV changes to the program you previously timed with the Multi-function Timer.

Technology Features

As always, Super Command is the foundation for every JVC TV, but this year, we've revamped our menus and retooled our remotes to make them better looking and easier to use. New and old customers alike will be impressed with our brightly colored menus combined with brilliant contrast which not only makes them pleasant to look at but also easy to read. The JVC menu systems are easy to operate too — directional arrows in the OSD and on the remotes make selecting options easy and intuitive — using the remote control's 4-way cursor command operation, all of the features of JVC's menu systems are as simple as up, down, left, and right.

Standard Menu System

Model sizes 13 and 20 inch come with our traditional menu that is every bit as easy to operate as our deluxe menu. Bright contrast and easy to follow onscreen directional keys make operating even our smallest screen sized menu systems a breeze.

Combo Menu System

Slightly different than the standard menu, the TV/VCR Combo menu systems are also bright contrast, easy to use, and contain onscreen directional arrows that easily help customers navigate through the many features of the TV and VCR as well.

New Icon-based OSD with Half Tone

Model sizes 27 and up feature our latest, greatest menu system. At JVC we believe that aesthetics are an added bonus to functionality, and so we revamped our menu systems and created all new menu screens that are icon-based, bright colored, high contrast menus with a new half tone background that lets you see the program behind them.

Universal Remote

Universal Remote Control w/DVD Control Capability (shown left)

Our new universal remote control is user-friendly, compact and easy to use as the buttons are logically placed where you would expect them to be. As always, our universal remotes come preprogrammed with the IR codes for today's most popular brands of DVD players, VCRs, satellite dishes and cable boxes.

Also, as in the recent past, the universal remote comes with a TV/VCR button that allows you to seamlessly switch the VCR between TV and VCR modes.**

Unified Remote Control for TV and JVC VCR Operation (shown right)

Our 13 and 20 inch model televisions come equipped with a Super Command TV/VCR unified remote control. With this remote customers can operate all the great features of the TV and the basic functions of their JVC VCR as well.

Unified Remote

AV-36360

Key Features

- 36" Diagonal Full Square Dark Tinted Picture Tube
- New Dual Tuner PIP w / EZ Surf
- 800 Lines Horizontal Resolution
- 3 Line Digital Comb Filter
- New On-Timer Volume Setup
- Hyper Scan High Speed Channel Changer
- New Universal Remote w / TV / VCR / Cable Box and DVD control

TV/VCR Combos

Whether you want your TV/VCR combo for the kitchen, your bedroom, or the kids playroom, JVC has a combo to fit your needs. And, no matter what room you specifically buy it for, any of our combos is portable enough to move from room to room depending on where you want your viewers to be. This year our core combo family contains three units. Again we have a 20 inch pure flat screen model with MTS stereo TV and 4 head HiFi VCR technology. This model features JVC's exclusive EZ JECT Rental Tape Rewind technology as well as Skip Search, Index Search, and Re-View. In our smaller screen category we still have our two beautiful 13 inch models — in black or our own appliance white. No matter which size you are looking for, both contain great VCR features such as Auto Repeat, Auto Tracking, and an eight event one month programmable timer.

TV-20F243

Key Features
- 20" Pure Flat Dark Tinted Picture Tube
- 2 Line Digital Comb Filter
- Metallic Silver Cabinet
- Super Command Remote for TV/VCR and Cable Box
